Ride Another Day

Complementing the Responsibility Code, #RideAnotherDay promotes three actions every skier and rider can take to help keep themselves and those around safer on the slopes. These three actions are:

BE READY

Be ready to slow down or avoid objects or other people at any time. Ski and ride in such a way that you are always able to control yourself regardless of conditions and avoid others and objects you may encounter on the run, groomed or otherwise.

PLAN AHEAD

Ease up at blind spots, check uphill when merging onto trails, and give other skiers plenty of room when passing. Look out for spots on the run where traffic merges or you can't see what's coming next. If you are unfamiliar with a run, take it easy the first time down it and make note of places where you'll want to slow down, such as cat tracks and rollers. Also, give other skiers and riders lots of room, especially if you are passing them. There's plenty of space out there, so there's no need to crowd each other.

STAY ALERT

Stay alert to what's going on around you, especially other skiers and riders. Being aware of those around and changing conditions will help you have a fun and safe day on the hill.

By doing these three things every run, you'll be helping keep the slopes safe and enjoyable, for you and everyone else.

SLOW ZONE

Slow Zone banners and signs mark an area or areas of the ski hill where trails converge, base areas and where skiing fast poses a risk of injury or collision. Green runs are also generally considered to be slow zones. Please approach these areas slowly and with extreme caution.

Not only is there higher traffic volumes in these areas, but they are often frequented by young children, beginners and seniors. Jumps and hits are not allowed in Slow Zones.

One of the biggest users of Green runs and Slow Zones are children. Children don't have a high awareness of what other people are doing and are easily distracted. They might be on one side of the run and quickly without warning veer over and cross the run without checking to see if anyone is coming. Kids and adults that are learning to ski also tend to fall on terrain transitions (knolls) and can be trying to recover from a crash in an area that can't be seen from above.

Failure to ski slowly and in control in the slow zones may result in lift privileges being revoked.

HOW FAST IS TOO FAST?

Many people have a hard time remembering what it was like to be a beginner skier or snowboarder, and having to worry about whether there is enough space to attempt a turn.

So first off, think about giving people some space. Next, remember that you must always be in control whether you are on an expert run or in a Slow Zone. This is the first point of the Alpine Responsibility Code. If you are in the air, you have no control over your speed or direction. The speed expected is relevant to how many people are on the run.

When there are more people on the run the 10% Rule is in effect. You may pass people at a speed approximately 10% faster than the flow of other skier traffic on the run.
